github.com/mgndxb

I build booking, payment and back-office systems that real businesses run on: seven products since 2024, six of them live and three taking real card payments. Before that I ran a field-sales team of about 20 as COO, and built the sales system that team still uses every day. I want a junior role on a team where I can learn from senior engineers and grow fast.

Experience

Independent developer — Helsinki — 2024-now

Products I designed, built and shipped, for clients and for myself.

FlagSales — Sales system for a field-sales team, paid client

Replaced counting sales by hand from a WhatsApp chat. Sellers sign in with a name and PIN and log each sale from a product list, and the system counts who sold what, and when. About 20 sellers have used it every day for over a year. Now rebuilding it from scratch after auditing my first version: roles enforced in PostgreSQL, 707 tests against a real database.

Defined PMU — Booking platform and studio app — definedpmu.com

A permanent makeup studio in Helsinki runs its whole business on it. Live availability, Stripe deposits with signed webhooks and automatic refunds, and double bookings blocked by PostgreSQL constraints. 1,568 automated checks across ten test suites.

Coded for Beauty — My own product — codedforbeauty.com

Website, online booking and a studio app for beauty studios, sold for £99 a month and built on the Defined PMU stack. Brow Ink (browink.co.uk), a paying client in Nottingham, UK, runs on it.

Lumos Energia — Booking and scheduling, paid client — lumosenergia.fi

Customer booking and an internal scheduling calendar for a solar and energy installer, with overlap prevention on every slot.

Also: CreatorMission (creatormission.com), a browser video editor I built to practise and shipped. Booking Conflict Engine, public code where PostgreSQL makes overlapping bookings impossible (github.com/mgndxb/booking-conflict-engine).

Flagsales Consulting Oy — Helsinki — 09/2025-10/2026

COO 03/2026-10/2026

Ran day-to-day operations for a field-sales team of about 20: scheduling, recruiting, interviews, hiring and staff issues. Building the team's sales system (FlagSales, above) led to this promotion.

Team lead 01/2026-02/2026 and **Seller** 09/2025-12/2025

Sold Helen electricity contracts at stands around Helsinki and was promoted on results.

Earlier work

PostNord Oy, B2B delivery driver — 04/2025-09/2025
K-Auto Herttoniemi, vehicle mechanic — 2022-2024
Kilon Osuus-auto Oy, delivery driver — 2021-2022
UPS Finland, delivery driver — 2019-2020

Skills

Every day	TypeScript, React, Next.js, PostgreSQL, Supabase, Tailwind CSS, Git and GitHub
Often	Stripe, Node.js, Vercel, Zod, Resend, Vitest
How I build	AI coding agents (Claude Code) write much of the code. The requirements, data model, business rules, review, tests and production checks are mine.

Education

Vantaa Vocational College Varia, vehicle mechanic qualification — 2016-2019

Languages

Finnish (native), English (fluent)
